Why FTHN

1. Distinguished References

Our outstanding record in catering to the security needs of the top players in all the industries we work with, armed with years of experience and extensive know-how, allows us to offer, not just products or services, but customized comprehensive solutions that suites your company's current and future needs.

2. Fostering Relationships

We understand that business relations are the foundation of success, and that's why our priority is to build strong lasting relations with our customers, and our partners. We see our client's business as ours, and we work continuously on bettering and fostering global partnerships, to be able to provide the optimum know-how and support to our customers.

3. Know-How

Our people are our strongest asset. Over the years we have built a team of experienced, highly qualified, and regionally recognized technical support staff, that provides 24/7 support to our customers. And we did not just stop there!
In line with our goal to spread our knowledge, and build a base of highly qualified security professionals, we have established an Academy for the training and qualification of IT graduates.

4. Information Security and Confidentiality:
Protecting customer information and maintaining confidentiality are fundamental values in our client interactions.

5. Adaptability and follow up

In today`s dynamic environment, adaptability is key to staying ahead. Our team exemplifies this through our comprehensive support services designed to evolve with your needs. We understand that each organization faces unique challenges, and our adaptable solutions ensure we meet those needs effectively and efficiently.

Our customers are our top priority. We are always available to answer their questions and meet their needs.
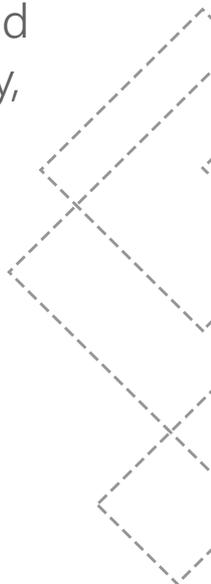

Market Realities

Companies no longer just want a vendor who responds to requests at a minimal cost, they need an innovative partner that can quickly turn ideas and projects into value-generators with minimal cash burn, and that's what we do.

FTHN Solutions offers software solutions tailored to business needs, covering a wide range of enterprises from large companies and organizations to small businesses. Additionally, we provide specialized solutions for the processes of public sector companies and organizations.

Solutions

ERP (Enterprise resource planning)

CRM (Customer relationship management)

HRM (Human Resource Management)

ATS (Applicant Tracking System)

BMS (Building Management System)

GIS (Geographic Information System)

EPM (Enterprise project management)

LMS (learning management system)

Solutions

1. What is ERP Software and How Does it Benefit Businesses?

ERP (Enterprise Resource Planning) software is a modular system designed to integrate a business's core processes into a single system. Companies using ERP software save significant time in managing organizational resources, as it eliminates the need for redundant data entry. By sharing data across different departments, it enhances accuracy and collaboration within the organization.

2. CRM Software: A Sales Accelerator and Customer Relationship Optimizer

CRM (Customer Relationship Management) software is a tool designed to establish, track, and maintain a business's relationship with its customers. The primary benefit of CRM is enhancing customer interaction and providing timely responses, which builds trust and turns prospects into loyal customers, leading to increased profitability from repeat purchases.

3. What is Human Resource Management (HRM) Software?

HRM (Human Resource Management) software is a digital tool that helps organizations manage and streamline their HR operations, including recruitment, employee data management, payroll, benefits administration, and performance management. This powerful tool can save time, reduce errors, and improve the efficiency of HR processes.

4. What is an ATS (Applicant Tracking System)?

We understand that business relations are the foundation of success, and that's why our priority is to build strong lasting relations with our customers, and our partners. We see our client's business as ours, and we work continuously on bettering and fostering global partnerships, to be able to provide the optimum know-how and support to our customers.

5. What is GIS Software?

GIS, short for Geographic Information System, is a complex and comprehensive system of tools used for analyzing and processing data. GIS provides organizations with maps and geographical information, enabling them to make more accurate and informed planning decisions for the future of a region.

6. What is a BMS (Building Management System)?

A BMS (Building Management System), also known as Building Automation System, refers to a set of control tools and equipment that use computers to monitor and manage a building's mechanical and electrical systems. These systems include HVAC (heating, ventilation, and air conditioning), lighting, security systems such as access control and CCTV, as well as safety systems like fire alarms.

7. What is EPM?

Enterprise Project Management (EPM) helps you analyze, understand, and report on your business. Simply put, when an organization, group, or company has multiple projects, it face the issue of Enterprise Project Management or EPM, which means they need to manage its organizational projects.

8. What is LMS (Learning Management System) software?

An LMS is a software application for managing, documenting, tracking, reporting, automating operations, and delivering training courses, educational programs, or development and learning programs..
